

AMENDMENT TO SPECIFICATION

In the Specification

A marked-up copy of the changes to selected paragraph(s) is provided below. Please enter these changes to the specification in the record.

Please AMEND the paragraph beginning on page 7, line 18 as follows:

A third step of combining the upper and lower substrates 12 and 11 together so that the image display means 20 are individually sealed up will now be described with reference to FIG. 3A. In the third step, a first sealing ~~member 31~~ member 41 is formed on the facing edges of the upper and lower substrates 12 and 11, and a second sealing ~~member 32~~ member 42 is formed such as to partition each of the image display means 20. After the first and second sealing members ~~31 and 32~~ 41 and 42 are coated, the upper and lower substrates 12 and 11 are aligned and then combined together. The first sealing ~~member 31~~ member 41 formed on the facing edges of the upper and lower substrates 12 and 11 protects the image display means 20 from an etching solution, which is used in a fourth step to be described later. In the third step, preferably, an unetchable protection ~~film 33~~ film 43 is attached to the lateral sides of the upper and lower substrates 12 and 11 as shown in FIG. 3B ~~in order~~ to prevent the sides of the upper and lower substrates 12 and 11 from being etched by an etching solution.
